I understand. I just expect to be asked as the word spreads of what Karen has seen in the Cabot data.

Thanks.

Since HW27 was received yesterday I'll need to get back to you in a few minutes to find out when these will be analyzed and how soon we can provide prelims.

I saw the HW47 result. This is apparently a different one.

I will resend you last night's report. The one that is really high is HW47. The information is on page 8.

Cindy, I understand from Karen Johnson's review of Cabot data that there's a well with high levels of arsenic, manganese and sodium reported. Looks like it's our HW-27, which was sampled on Monday 2/13. Can you give me an idea when we might see it show up on your preliminary chart?

Thanks.
